

Nanex Eco Refresher

Technical information:

The Nanex Eco Refresher contains a dual active deodorising technology. Firstly, a bio based polymer is used to directly & irreversible bond with the odour molecules for an instant removal of bad smells. Secondly other bio based technology is designed to deeply penetrate the textile or leather and remove the deeper bacteria and molecules producing odours. An instant effect, and a durable effect is needed to remove deeply rooted odours from textiles & leathers, which is not an easy task. Once the removal is complete the product keep working up to 30 Days removing new bacteria that could produce new odours.

The product should be applied across the whole area that provides the smell for an efficient removal. The product will break down most odours such as: Smoke, urine, sweat, organic smells,... * The product is specially designed for fashion wear: Shoes & Clothing and removal of sweat odours.

Applications:

The spray-on Refresher is designed to be used for: Shoes, inside of shirts (armpits.) , jackets, clothing, hats, gloves...

List of active ingredients:

- Water based solution
- 100% bio-based odor-neutralizing polymer complex
- 100% Fermented Bio-based surfactant
- >95% Organic cosmos approved fragrances (natural perfume.)

No palm-oil, Coco's or soy derivatives used in the formulation! No harmful or toxic preservatives or components like, heavy metals, phosphates, NTA, EDTA, chlorine Present.

Sustainability & Technology summary:

Most deodorisers in the market are very cheap, but do not effectively solve the problem for the end-customers. They are often based on alcohol, or a biocidal ingredient combined with a synthetic allergy containing fragrance. The alcohol or biocide partially "kills" the odour providing bacteria. (the ones on the surface) and partially covers the smell with a strong fragrance. Odours are not fully removed and come back quickly in this approach. Lastly most alcohol & biocides are toxic for humans & the environment. Our solution is designed for a more efficient & durable approach, using technology to removes the superficial smell but also technology to reach the core of the problem. Using bio based ingredient only, you stimulate an environment that will reduce the chance of odours returning quickly.

A unique formula with the highest environmental standards in the market, containing more than 50% fermentation technology, containing 100% bio based ingredients that can easily be degraded by humans and the environment.

Possible claims:

100% eco-friendly, 100% toxic free, 100% bio based active ingredients, water based, Air-pressured bottle.

Certification possible:

VEGAN / BLUESIGN
